

Energy solutions to generate growth

My Energy Consultants not only find you the best energy deals, we make sure you never overpay. We help you reduce energy wastage, meet energy legislation obligations and can handle your utility infrastructure projects.

Energy Procurement

Energy Management

Bureau Services

Energy Procurement

Your business needs to protect itself from rising energy costs.

Our business energy procurement service will find you the gas and electricity supply you need, on the terms most favourable to your business.

We can;

- Compare complex tariffs across multiple suppliers
- Find the right deal for you and secure the best quotes
- Complete paperwork and negotiate on your behalf

You will also be working with an organisation which is officially regulated by the Utilities Intermediaries Association

Energy Management

Your organisation has to combat rising utility prices and increased energy legislation and doing so successfully requires effective energy management, such as;

- Utility metering, monitoring and targeting
- Accurate measurement of energy usage
- Analysis of how energy usage can be improved

Your business needs to use energy smartly and when you use low-cost wireless hardware, you can gather meaningful energy data in real time throughout your business. This data can measure levels of:

- Temperature
- Humidity
- Occupancy
- Lighting
- CO2

You will receive a clear understanding of how gas and electricity are being used when working with us. This will include details on use by day, by night, and by area.

Our solution is fully compatible with your existing BeMS and HVAC systems. Installation is simple and the disruption to your business negligible. You will benefit from a complete end-to-end solution.

Bureau Services

Did you know that 1 in 5 business energy bills include errors?

Spotting mistakes in energy bills is often easier said than done. Utility invoices can be complex and identifying errors is challenging and takes time. We can handle this for you.

Common reasons for mistakes in your energy bills include:

- Incorrect application of tariffs
- Estimated meter readings
- Faulty meters

We will carefully scrutinise all current business gas and electricity invoices and ensure that you are only paying what you should. We will identify errors before they impact your business.

Using market-leading utility software, your company will be working with an energy partner that automatically checks your commercial energy bills against more than 120 energy bill variables regardless of who the suppliers are or what kind of contract you have.

Cost Recovery Service

What happens if you have already been overcharged?

Our cost recovery service will spot any instances of overcharging and obtain the refunds you are entitled to. We can uncover any anomalies over the last 6 years and recoup money on your behalf, regardless of supplier.

If you are unsure whether any overpayments have been made, we can provide reliable analysis. This means that even if there is no cost recovery to be done, you have peace of mind that your costs are not higher than they need to be.

The Climate Change Levy

The right energy partner can keep one eye on the climate change levy on your behalf and ensure you are eligible to access it. This includes everything from submitting returns to updating you with your consumption versus target levels.

We will;

- Access accurate energy data and submit returns
- Handle any audits by the Climate Change Agency
- Help you to reduce your overall emissions
- Access the financial benefits of the Climate Change Levy

Accessing the benefits of the climate change levy is not only financially beneficial, but also provides Public Relations advantages.

Why choose My Energy Consultants?

All-in-one

We offer a single point of contact to help you reduce energy wastage, meet energy legislation obligations and handle your utility infrastructure projects.

Experienced

Founded by business utility industry professionals, we bring you the knowledge and insight you need to make the right energy decisions for your business. We know the best suppliers, of gas and electricity, of infrastructure and software systems. We understand legislation and how to increase energy efficiency.

Regulated

We're one of the first business energy brokers to be regulated by the independent Utilities Intermediaries Association (UIA), a not-for-profit organisation recognised by all of the major energy suppliers, energy watch and Ofgem. It means you can be certain that we're always acting on your behalf with your best interests in mind. You can trust us to give you professional, impartial advice that makes sense for your business.

Forward-thinking

You can rely on us to stay at the forefront of future developments in the business energy industry. Commercial energy pricing strategies, climate change legislation, technologies for energy monitoring and control and sources of renewable energy. Whatever the thinking, whatever the trend, we'll keep your business ahead of the curve.

Award Winning

We won Consultancy of the Year - Large Customers 2023 at the Energy Live News awards. The most prestigious awards event in the energy consultancy industry.
